

# 45<sup>TH</sup> ANNUAL ST. ALBERT'S DAY

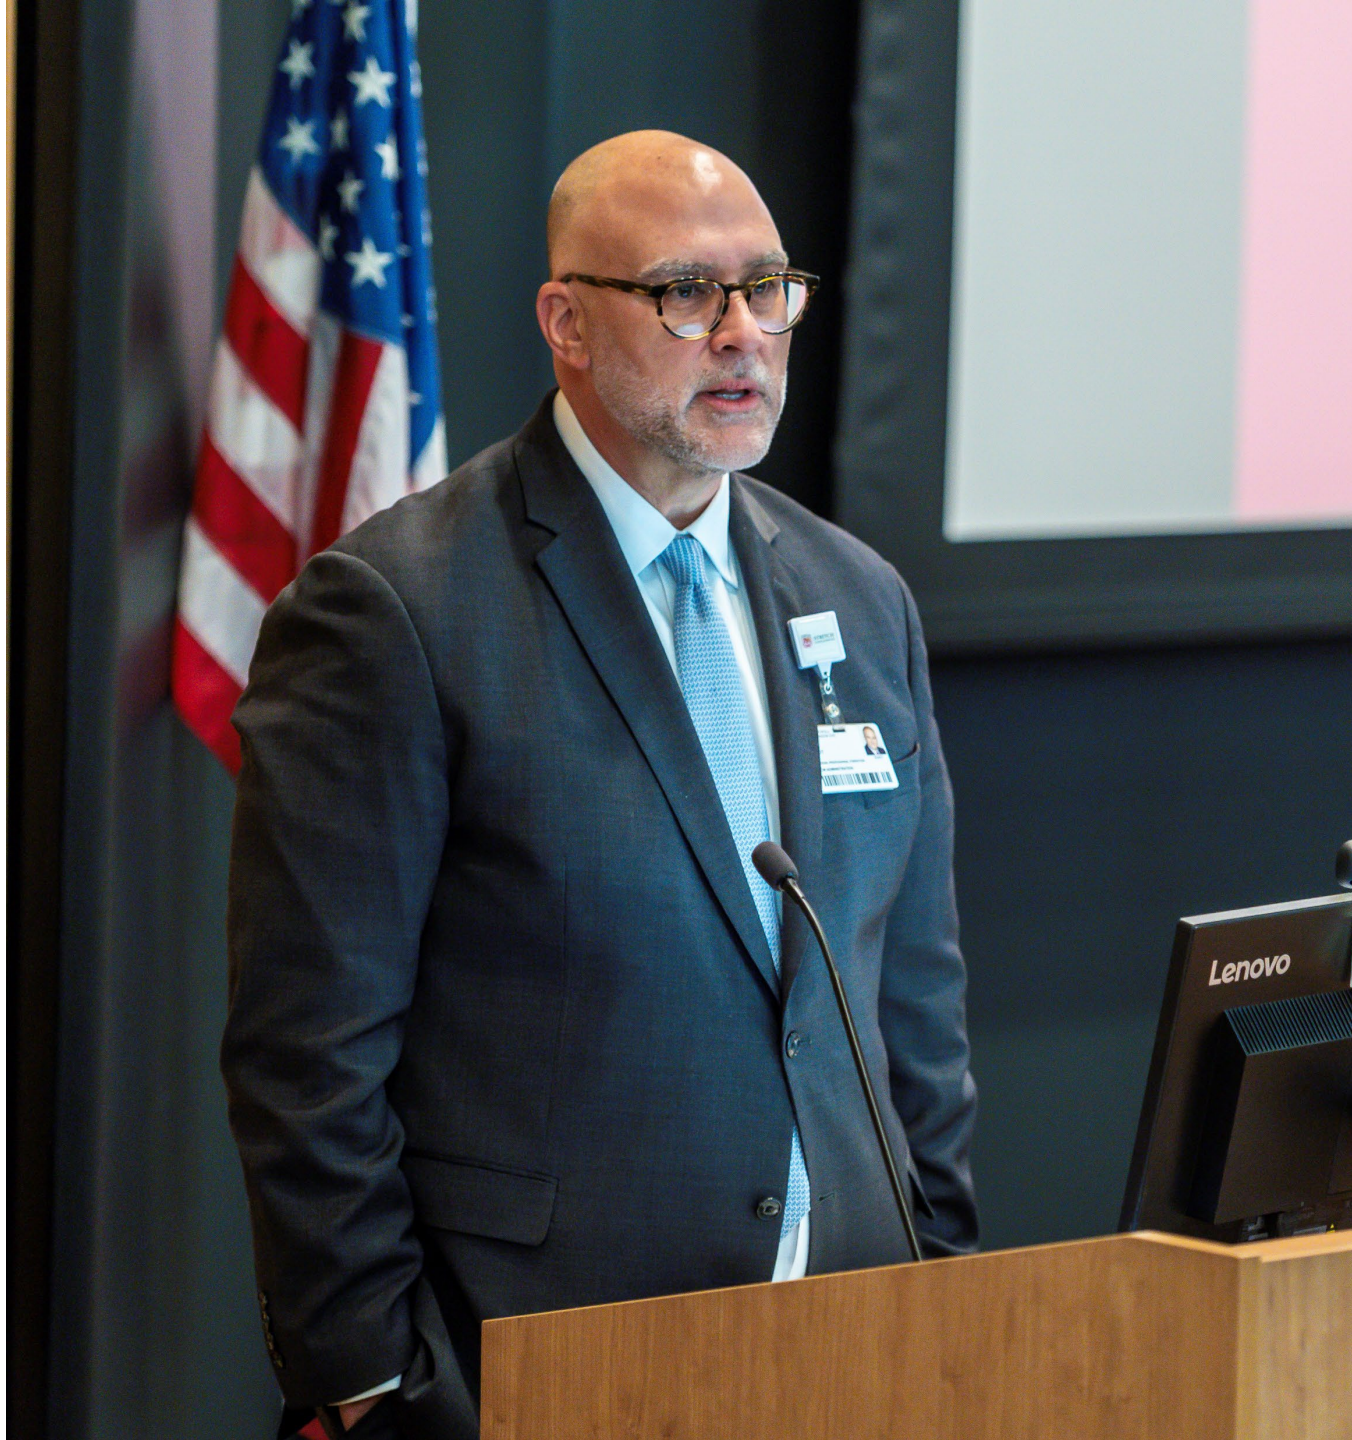

*Saint Albertus Magnus was also known as Albert the Great, Sankt Albert der Grosse, Albert of Cologne, or Albert of Lunigen. Dominican bishop and philosopher best known as a teacher of St. Thomas Aquinas and as a proponent of Aristotelianism at the University of Paris. He established the study of nature as a legitimate science within the Christian tradition. By papal decree in 1941, he was declared the patron saint of all who cultivate the natural sciences. He was the most prolific writer of his century and was the only scholar of his age to be called "the Great"; this title was used even before his death.*

*He was among the first and greatest of the natural scientists, gaining a reputation for expertise in biology, chemistry, physics, astronomy, geography, metaphysics, and mathematics. His life and writings emphasized the importance of experimentation and investigation.*

*Loyola's annual St. Albert's Day embodies Saint Albert's spirit by celebrating research and the sharing of scientific knowledge with others.*
